**DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 27, 2005 has been entered.

2. Claims 21-25 (newly added) are presented for examination (Claims 1-20 are canceled). New claim 21 corresponds to claim 8, rewritten in independent form including all limitations of its base claim and the intervening claim. Likewise, new claims 22-25 correspond to claims 14-17, rewritten in independent form including all limitations of their base claim and the intervening claims. Claims 8 and 14-17 stand objected to as being dependent upon a rejected base claim.

3. This office action is in response to the amendment filed on January 27, 2005.

***Allowable Subject Matter***

4. Claims 21-25 are allowed.

***Reason For Indicating Allowable Subject Matter***

5. The following is a statement of reasons for the indication of allowable subject matter: Claims 21-22 identifies distinct feature, the computer apparatus and method for providing personalized information. The closest prior art Lynch et al (U.S. Patent No. 6,018,715) in view of Reese (U.S. Patent No. 6,374,237) discloses for providing a database comprising a plurality of contributor content records and a plurality of contributor profile records, wherein each contributor content record corresponds to a contributor profile record, and wherein the database comprises descriptor information corresponding to the contributor content records, obtaining a user profile record, obtaining a user search query, comparing the user search query with at least a portion of the descriptor information, comparing at least a portion of the user profile record with at least two contributor profile records, providing personalized information comprising contributor content records based upon the results of the comparisons. The prior arts do not address the method for the user profile record and the contributor profile plurality of corresponding data elements, and the step of comparing at least a portion of the user profile record with at least records each comprises two contributor profile records comprises the steps of: i) comparing a first data element of the user profile record with a corresponding first data element of a first contributor profile record to generate a first comparison score, ii) comparing a second data element of the user profile record with a corresponding second data element of the first contributor profile record to generate a

second comparison score, iii) combining the generated comparison scores to calculate a first match rating between the user profile record and the first contributor profile record, iv) repeating steps (i) - (iii) using a second contributor profile record to calculate a match rating between the user profile record and the second contributor profile record, and using the calculated match ratings to provide the personalized information. Thus, Lynch et al and/or Reese fail to suggest the claimed limitation as mentioned above in combination with other limitations of the dependent claims. Claims 21-25 are allowable over the prior art for being directed to a combination of claimed element as indicated above.
